

1. An isolated DNA comprising a nucleotide sequence as set forth in SEQ ID NO:1.

E2  
SUB FID

~~2. A host cell comprising an isolated DNA according to claim 1.~~

E1

~~4. (Four Times Amended) A vector molecule comprising an isolated DNA according to claim 1.~~

5. A

A vector molecule according to claim <sup>4</sup>3 comprising transcriptional control sequences.

3. A

An isolated DNA comprising a nucleic acid sequence that encodes the polypeptide with the amino acid sequence set forth in SEQ ID NO:2.

6. A

A host cell comprising a vector molecule according to claim <sup>4</sup>3.

E3

7. A

A vertebrate host cell which can be propagated in vitro and which is capable upon growth in culture of producing a polypeptide with the amino acid sequence set forth in SEQ ID NO:2, wherein said cell comprises at least one transcriptional control sequence that is not a human adican transcriptional control sequence, wherein said one or more transcriptional control sequences control transcription of DNA encoding a polypeptide with the amino acid sequence set forth in SEQ ID NO:2.

8. A

A vertebrate cell according to claim <sup>7</sup>10 wherein said one or more transcriptional control DNA sequences are non-human transcriptional control sequences.

9. A

A method for producing a polypeptide which comprises:  
culturing a host cell having incorporated therein an expression vector containing an exogenously-derived DNA of claim <sup>3</sup>7 under conditions sufficient for expression of a polypeptide encoded by the DNA of claim <sup>3</sup>7 in the host cell, thereby causing the production of an expressed polypeptide; and  
recovering the polypeptide produced by said cell.

10. A

An isolated DNA molecule with a nucleotide sequence complementary to the nucleotide sequence of the isolated DNA according to claim 1.
